

# Hybrid Pediatric Tape™

Latex Free Pediatric Endotracheal Tube Holder,  
Cannula and NG/OG Tube Security  
Hybrid Pediatric Tape (Part Number 11800)

Small children present difficult endotracheal tube securing issues because of their delicate skin integrity, the potential for copious secretions, sedation vacations and frequent changes in position, which may affect the adhesive securing ability of tapes. Clinicians have used many different types of configurations and cutting patterns to ensure the stability of the child's endotracheal tube. B&B Medical Technologies' Hybrid Pediatric Tape now offers the best solution to secure the endotracheal tube and protect the child's skin.

Hybrid Pediatric Tape combines the best features of hydrocolloid and adhesive tape. Gentle hydrocolloid tape safely secures and contours to the child's tender skin while the adhesive tape firmly attaches to the endotracheal tube. The combination of tapes provides the perfect solution for long term attachment of the Hybrid Pediatric Tape as well as NasoGastric Tubes, OroGastric Tubes and Nasal Cannulas.

## Benefits

### Convenient...

- Ease of Applications
- Time Saving, Pre Cut Tapes
- Complete Kit with skin prep

### Safe...

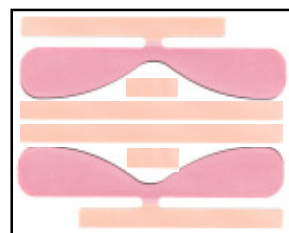

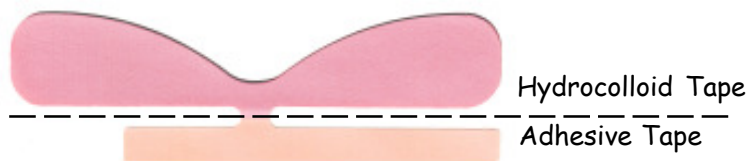

- Skin Protective Qualities
- Allows Skin to Breathe
- Latex Free, Hypo-Allergenic
- Enhanced Durability for Tube Protection

### Cost Effective...

- Two Tapes per Package
- Secure Hold
- Used to Secure ETT, Cannulas and OG/NG tubes

### Versatile...

- Pediatric Application
- Contours to Skin for Secure Fit
- Secures additional small tubes and cannulas
- Use in All Clinical Conditions
