B&B Adult Test Lung™

Simulates nominal compliance and resistance; Included elbow connector adapts to all patient circuits

The B&B Adult Test Lung 1.0 L provides an economical choice for providing high quality demonstration applications on mechanical ventilators for adult patients. The B&B Adult Test Lung simulates the respiratory system, providing nominal levels of resistance and compliance. Each comes packaged with a 1.0 latex-free silicone ventilation bag and an elbow connector. Each bag is durable, easily removable and can be cleaned or sterilized as needed. The B&B Adult Test Lung comes with a standard fitting 15 mm ID x 22 mm OD elbow connector that adapts to all patient circuits.

The B&B Adult Test Lung is compact in design and lightweight. It is the ideal tool for demonstrations in respiratory care, biomedical labs and anesthesia departments.

The complementary Precision Resistor Kit™, part number 20118, provides the healthcare practitioner with the needed adapters to demonstrate changes in airway resistance. The Kit contains three resistors: Rp5, Rp20 and Rp50. The Precision Resistor Kit can be cleaned and sterilized.

SAFE
Latex free, hypoallergenic

Can be cleaned and sterilized between uses

COST EFFECTIVE
Complete kit for demonstration of ventilator, anesthesia equipment

Silicone ventilation bag is easily removed for cleaning

CONVENIENT
Packaged with standard fitting 15 mm ID x 22 mm OD elbow connector for ventilators

Easy to use, no assembly required

VERSATILE
1.0 L silicone bag for adult

Designed for use with demonstration of ventilators in respiratory care, clinical teaching areas and biomedical departments
